

The Jacobs Center Research Seminar Series

Prof. Dr. Todd Hare

Department of Economics, University of Zurich
Member of the z-proso International Research Network
(zIREN)

The Influence of Peer Victimization on Social Decision Making and the Brain

This Jacobs-Center-funded project investigates how late childhood/adolescent peer victimization affects behavioral and neural responses during social decision making in young adults using a subset of the z-proso longitudinal sample. Specifically, Prof. Hare and his team test how experiences of peer physical or relational victimization between the ages of 11 - 17 years old influence brain structure, function, and social decision-making at 20-21 years of

age. Prof. Hare will present a mix of concrete results about brain structure and current work-in-progress in regard to behavior and brain function.
